Please mark the following activities that are difficult and the symptoms you experience *even with glasses*.

- | | |
|---|--|
| <input type="checkbox"/> Reading | <input type="checkbox"/> Seeing rings or halos around lights |
| <input type="checkbox"/> Recognizing people's faces | <input type="checkbox"/> Glare caused by headlights or bright sunlight |
| <input type="checkbox"/> Seeing steps, stairs, or curbs | <input type="checkbox"/> Hazy and/or blurry vision |
| <input type="checkbox"/> Reading traffic signs, street signs, etc. | <input type="checkbox"/> Poor color vision |
| <input type="checkbox"/> Doing fine handwork like sewing or carpentry | <input type="checkbox"/> Double vision |
| <input type="checkbox"/> Writing checks or filling out forms | <input type="checkbox"/> Poor depth perception |
| <input type="checkbox"/> Watching television | <input type="checkbox"/> Poor night vision |

When did these symptoms begin? _____

Driving:

Do you currently drive a car? Yes No

Do you have difficulty driving at night because of your vision? Yes No

Are you using any eye drops? Yes No If yes, what kind? _____

Are your symptoms worse in: Right Eye Left Eye Same in both eyes

CATARACT SURGERY PATIENTS ONLY

Advanced Implant Options

When considering cataract surgery, it is important to understand your implant options so you can choose a lens that best matches your lifestyle. Unlike monofocal lenses, advanced presbyopic and toric implant options have the potential to reduce your need for glasses or contact lenses altogether.

Are you interested in seeing well *at distance* without glasses after surgery? Yes No

Are you interested in seeing well *at near* without glasses after surgery? Yes No

Cataract surgery can almost always be safely postponed until you feel you need better vision. If stronger glasses won't improve your vision anymore, and if the only way to help you see better is cataract surgery, do you feel your vision problem is bad enough to consider cataract surgery now? Yes No
